Project Proposal Presentation Outline

Slide 1: Title Slide

- **Slide Title:** Final Year Project Proposal
- **Project Title:** [Insert Your Project Title Here - e.g., *Automated Crop Disease Detection Using Deep Learning*]
- **Presenter Details:** Your Name, Roll Number/Student ID.
- **Guide/Supervisor:** Prof. [Supervisor's Name].
- **Department & Institution:** Department of Computer Science & Engineering, [University Name]. logo

Slide 2: Introduction & Domain Overview

- **The Domain:** Briefly introduce the tech stack or domain (e.g., Computer Vision, Blockchain, NLP, Cloud Computing).
- **Context:** Set the stage. What is the current state of this field?
- **Core Focus:** A one- or two-sentence summary of what your project aims to do.

Slide 3: Problem Statement

- **The Gap:** What is currently broken, inefficient, or missing in existing systems?
- **Impact:** Why does this problem matter? (e.g., *“Manual inspection takes hours and is prone to human error, costing industries millions annually.”*)
- **Clear Statement:** Summarize the exact problem your project will solve.

Slide 4: Objectives & Scope

- **Primary Objective:** The main goal of your project.
- **Secondary Objectives:** To build an intuitive user interface for end-users. (Using figma)
- **Scope:** Define the boundaries. What *will* it do, and what is explicitly *out of scope* for this project?

Slide 5: Literature Survey / Prior Work

Provide a quick table or list showing that you've done your homework.

App Based

Solution type	Strengths	Limitations	Gap relative to your idea
Image-only apps/models	Easy to deploy, simple workflow, strong baseline	Weak in noisy field conditions, no farmer context, and limited	Your idea adds a farmer description
XAI image-only models	Better transparency and trust.	Still black-box-like in practice, and still image-dependent.	Your idea explains the image + farmer

Solution type	Strengths	Limitations	Gap relative to your idea
Sensor fusion systems	Can improve robustness with extra modalities.	Costly, complex, not smartphone-friendly for most farmers.	Your idea is cheaper and more
Image-text multimodal research	Better semantic grounding and richer diagnosis.	Often research-benchmark driven, not farmer-workflow driven.	Your idea can be built for real farmers' use.

OR (Research-based)

Authors & Year	Methodology Used	Key Findings / Strengths	Limitations / Gaps
Smith et al. (2024)	CNN Architecture	Achieved 91% accuracy	High computational lag
Kumar & Lee (2025)	SVM & Random Forest	Lightweight deployment	Struggled with diverse datasets

- **Our Edge:** How your project builds upon or fixes these limitations.

Slide 6: Proposed Methodology & Architecture

- **High-Level Flow:** Explain the step-by-step process (e.g., Data Collection ->Preprocessing ->Model Training ->Deployment).
- **System Architecture:** (Insert a block diagram here).
- **Key Innovation:** What makes your approach unique or efficient?

Slide 7: Technology Stack

- **Frontend:** React.js, Flutter, HTML/CSS (depending on web/mobile).
- **Backend:** Python (FastAPI/Flask), Node.js.
- **Database:** PostgreSQL, MongoDB, or Firebase.
- **AI/ML/Specialized Tools:** TensorFlow, PyTorch, OpenCV, AWS, etc.
- **Hardware/Environment Requirements:** Minimum RAM, GPU requirements (if training heavy models).

Slide 8: Project Timeline & Gantt Chart using Agile methodology

Break down how you plan to finish this project across the semesters.

- **Preliminary research:** Research, study, Requirement finalization, SRS submission
- **Module 1 (Specify timeline):**
- **Module 2 (Specify timeline):**
- **Module 3 (Specify timeline):**
- **Module 4 (Specify timeline):**
- **Module 5 and so....**

Slide 9: Expected Outcomes & Future Scope

- **Deliverables:** What will you actually hand over? (e.g., Working web app, trained API, comprehensive project report).
- **Impact:** How will this help the target users?
- **Future Enhancements:** Features you could add later (e.g., scaling to the cloud, adding multilingual support).

Slide 10: References (screenshots of research papers and links of apps or web applications) & Q&A

- **The Floor is Open:** "Thank you! Any questions?"

All research papers and app/web links should be given.
